

K112 Insta-Temp

Granulated Roof Patching Compound

INSTA-TEMP is a temporary roof patch and a naturally mined product which has a unique molecular structure that permits it to absorb many times its original weight in water. **INSTA-TEMP's** unique swelling ability allows it to clog roof leaks because once wet, this product swells several times its original size, turns into a gel and creates a temporary barrier which minimizes seepage of impounded fluids. This absorption and subsequent swelling takes place in a matter of minutes. It is ideal for temporary patching that needs to be done on flat roof areas even during a rain shower. **INSTA-TEMP** also works well to create a circular dam around where you need to work and pump the water out to create a dry work area in the middle.

Directions: For use on flat roofs only. Spread a layer of **INSTA-TEMP** about a half inch thick over the suspected leakage area which must be wet. **INSTA-TEMP** will then flow to the trouble spot and create an instant seal. All residue must be completely removed before making any final repair or seam. Permanent repairs can then be made as weather permits. For permanent repairs use Omega's **ALL WEATHER PATCH**.

Health	1
Flammability	0
Physical Hazard	0
Protection	-

Areas of Use:

- *High rise buildings
- *Cities and Counties
- *Hospitals
- *Hotels
- *Churches
- *Schools
- *Apartment complexes

Appearance and odor.....	Solid, granular, pellets, powder, chips, no odor.
Specific Gravity.....	2.5503 estimated
VOC	0% estimated
Net Wt.	approx. 20 lb. pail
